DATE: Monday December 4, 2017
TIME: 4:00 PM
LOCATION: CDD Conference Room 107

MEETING

Introductions and announcements. Welcome new people to group, including Ann Winegardner, Presbyterian Hospital Neonatologist, Kathy Romero, UNM Pediatrics Clinical Nurse Educator

OT LEND trainee Sydney Marable announced she has 40 hours to help with CP Early ID initiative. Marybeth added that 2 other students have done literature review (Drea Caruana and Thy Ngo) related to early screening. PT Student Josh Lucero will do related project for his capstone project to find out what is being done by other programs in other states and Pt student Michelle Salas will be looking at telehealth models
Marybeth added that this is a hot topic at conferences—need to take survey.

Dr. Armstrong shared that there is a new tool on the ___ website

Sandy emailed the SWOT (Strengths, Weaknesses, Opportunities, Threats) out to group with added information from the brainstorm meeting with Dr. Maithe 11/17. (She deleted the age groups).

Telehealth -- Research has already been done. Dr. Whisler—Telehealth is used when medical services not available. Sandy suggested finding out if child could be at home, then see if video can be taken there.

ECHO – Kathy described UNM ECHO project. Video consulting about patient between UNM specialists and patient provider team in outreach areas. This takes more time on the provider’s side. ECHO started with Hepatitis C Clinic where there were not enough qualified providers and patients were not able to come to Albuquerque (or were in prison) for follow-up. The idea is to build capacity locally, patients seen in own community.

Marybeth—Need to develop Plan/Summary of Needs:

Gerri said she had no additional or new information, except for info she sent on HINE training.

What model does Dr. Maitre use?.
A baby is identified as at risk in NICU
Triage protocol – medical risk criteria
That’s what we use for follow-up. Dr. Maitre was looking at higher risk.
This needs to be standardized throughout state NICUs (4 in NM).
This is important in Las Cruces where kids are followed in El Paso.
Elizabeth—Can we do GMA before 15 weeks
Dr. Winegardner—0-20 weeks
Marybeth—HINE is 2-24 months. HNNE (baby HINE)

Needs List:
Toolkits. Information. Dr. Maitre said she could loan hers, and we could change logos, etc., adapt.
Gerri—CP Toolkit from CPNowFoundation.org

Erin—Understood Toolkit was something for each type of organization. What do we do, who do we refer to, what is action plan?
Dr. Armstrong—Once we have info, the pediatricians can access, we need to be able to send patients somewhere.
Karen—EI has not had time to run data concerning the state’s demographics though it likely won’t indicate CP. Eligibility tends to be developmental delay or medical risk.
Marybeth—Gerri to email about Toolkits. Guideline implementation resources. What is Toolkit?
Gerri—Pathway grant may help with everything that is already going on.
Dr. Whisler—algorithm, a pathway and a took kit.
Marybeth—Josh can have look into pathway—what is already being done.
Erin—on Training Toolkit Module—I understood from Dr. Maitre notes, that a small amount of information goes into flyer. Basically it is about increasing knowledge base of clinical practice.

Marybeth—Training April 5, Free. HINE
Send core group to set up your program.
If we can get HINE or HNNE training, who would be interested? (Elizabeth, ____ raised hands). Discussion about usefulness in NICU.
Dr. Winegardner—Are we trying to put babies into risk categories?
Kathy—When is best time for neuro assessment? Maybe that’s how we would pick which exam we would do.

Dr. Armstrong—Imaging

Dr. Winegardner—In state, we have problems with follow-up. Is payment for MRI an issue? Hardly any are ordered—only when very serious problems present.

Kathy—Pick one and send for training. We can get consensus.

Dr. Armstrong—It is easier if we can get someone here.

Geri—Discussed Conference planning for Nov. 2018. Weekend, continuing Ed, find sponsors. On medical side, provider part, we would give a lecture (time) at our conference. Topics for conference—Amazing Newborn—for doctors.

Dr. Winegardner—How long does HNNE take?

Kathy—If I bring in 2 month-old, with good AGPAR, what is going to trigger eval?

Dr. Whisler—Parent concerns, Pediatrician’s exam and concerns.

Sandy—Idea about ECEP small team of doc and PT to see infants—outreach.

Dr. Whisler—Medical Society is bringing in speakers from sub-specialty groups. September 14, 2018. That is how we would like to bring in pediatricians.

Kathy—On getting info out using conference.

To keep cost down, there would be pre-conference informational meeting. Then the training would follow at another session. Some organizations charge.

Consider applying for grant.

Look at the Kellogg Foundation. They paid for breastfeeding grant, and pay for many initiatives in New Mexico.

Give them goal of identifying babies with CP earlier. To train providers, and get information together. Once you show that it is working, then go to Legislature. Fight that battle for a couple of years, then get it paid for by Medicaid.

Dr. Whisler—Find out who wrote breastfeeding grant. Find out how they did it.

Marybeth—We need someone to provide admin support. We are all doing this work in additional to our full-time jobs!

Grant planning workgroup set date of Jan. 4 at 4:00

Dr. Armstrong—Will check into Carrie Tinley Foundation to help fund conference.
